Advanced Diploma in C# Programming

Developers building applications for Windows platform use the modern and popular C# programming language that runs on the .NET Framework. Commonly used in large enterprise applications C# has been proved to accelerate the development process at all stages of the software lifecycle. C# is used in all facets of commercial software, from stand-alone, rich applications to responsive web-based software. Unlike Microsoft languages of the past, C# is truly a multi-platform programming language running on all major operating systems and mobile devices.

This course provides the core C# classes designed to teach the fundamentals of programming with C# and the .NET Framework while the electives are tailored to meet specific technology goals. Students will be introduced to the C# programming language and exposed to real-world scenarios that will help them build the confidence needed to succeed as a programmer in this rapidly changing industry.

Diploma in Programming

Duration

3 months

Career Path

Programmer

Outcome

Programming in C# Advanced Diploma Certificate

Cost

N150,000

Data Management

We're creating more data now than ever before in human history. It's valuable and offers potential insights into key areas of the customer experience, business operations, and even major research questions. We have to be able to access this data easily to get to those insights. If you don't have a data management system in place, you've got an enormous problem. Your data quality suffers when you have no type of data governance to wrangle big data into something usable. With more businesses and organizations prioritizing data integration, you need a management system that works.
